STUDENT PREPARATION MATERIAL

C Language Quiz

Sample Question Bank and Test Instructions

Assessment	Mode	Attempt
20 MCQs	Time-bound on CodeSkill	One allotted slot

About this sample

This sample is intended to help you prepare for the C Language Quiz. The actual quiz will be conducted alongside the lab evaluation through CodeSkill. It will contain 20 MCQs drawn from the notified syllabus. The questions and options in the live quiz may differ from this sample.

Before you begin

Test instructions

- Your CodeSkill login credentials will be sent to your registered email address. Check your inbox and spam/junk folder, then join your assigned test slot a few minutes early. Your subject coordinator will share the exact date and time.
- The quiz will be available only during your allotted slot. Once the slot ends, you will not be able to start or continue the test.
- The test is time-bound. It will be submitted automatically when the timer ends. You may also submit it yourself before time expires.
- You have one attempt only. Check each answer before submission; changes may not be possible after submitting.
- Use a laptop or desktop with a reliable internet connection. Keep your browser open and avoid refreshing or closing the test page.
- Maintain academic integrity. Do not switch tabs, copy or paste content, collaborate, or use unauthorized material. Where enabled, these activities may be restricted or monitored, and repeated violations can trigger auto-submission.
- For login or access issues, contact your subject faculty or coordinator before your allotted slot begins.

Syllabus coverage

Unit I	Introduction to C, operators and type conversions, decision control structures, looping constructs, break/continue/goto, and iterative problem solving.
Unit II	Arrays and matrices, strings in C, pointers, pointer arithmetic, and dynamic memory allocation.
Unit III	Functions, parameter passing, variable scope, recursion concepts, and recursive problem solving.

Note: An answer key is included on the final page for self-checking after you attempt the questions.

Sample Question Bank

Attempt the following representative questions independently. Select one best answer for each question. The answer key is provided on the final page for self-checking.

01 **Which loop in C is guaranteed to execute its body at least once, even if the condition is initially false?**

A. do-while loop
B. while loop
C. for loop
D. nested for loop

02 **In a C `for(initialization; condition; update)` loop, which expression is executed only once?**

A. initialization
B. condition
C. update
D. loop body

03 **What happens if the condition expression in a `for(i = 0; ; i++)` loop is omitted in C?**

A. The omitted condition is treated as nonzero, so the loop continues until an exit statement such as break, return, or goto is used.
B. Compilation error due to the missing condition
C. The loop executes 0 times
D. The loop executes exactly 1 time

04 **Which jumping statement immediately terminates the innermost enclosing loop or switch statement?**

A. break
B. continue
C. goto
D. return

05 **Which statement skips the remaining statements in the current iteration and transfers control to the continuation point of the nearest enclosing loop?**

A. continue
B. break
C. goto
D. exit

06 **In a `while` loop, where does the `continue` statement transfer control?**

A. Directly to the conditional test expression of the while loop
B. To the first statement inside the loop body
C. To the statement immediately following the loop
D. To the initialization statement before the loop

07 **In a `for` loop, where does the `continue` statement transfer control?**

A. Directly to the iteration expression (the third expression) of the for loop
B. Directly to the initialization expression
C. Outside the for loop body
D. To the start of the main() function

08 **What is the scope of a label used with a `goto` statement in C?**

A. The current function in which the label is defined
B. The entire source file
C. Only the current block {}
D. Across all linked C files

09 **Which of the following loops is classified as an exit-controlled loop in C?**

A. do-while
B. while
C. for
D. if-else

10 **What is required at the very end of a `do-while` statement in C?**

A. A semicolon ; after while(condition)
B. A colon : after while(condition)
C. Curly braces {} after while(condition)
D. No punctuation is allowed after while(condition)

11 **How many times will the body of the following loop execute?**

```
for(int i = 1; i < 11; i += 2) {
printf("*");
}
```

A. 5 times
B. 6 times
C. 4 times
D. 10 times

12 **How many times will the body of the following loop execute?**

```
for(int i = 2; i < 14; i += 3) {
printf("*");
}
```

A. 4 times
B. 5 times
C. 3 times
D. 12 times

13 **How many times will the body of the following loop execute?**

```
for(int i = 3; i < 17; i += 4) {
printf("*");
}
```

A. 4 times
B. 5 times
C. 3 times
D. 14 times

Answer Key

Use this section only after attempting the questions independently.

Question	Correct answer
01	A - do-while loop
02	A - initialization
03	A - omitted condition is treated as nonzero until the loop is exited
04	A - break
05	A - continue
06	A - control transfers to the while loop's conditional test
07	A - control transfers to the for loop's iteration expression
08	A - the current function containing the label
09	A - do-while
10	A - a semicolon after while(condition)
11	A - 5 times
12	A - 4 times
13	A - 4 times

Important reminder

The answer positions in this sample must not be treated as a pattern for the live quiz. The actual assessment may use different questions and answer-option positions.
